

Jayaseelan

Backend Developer | Laravel & Full-Stack Engineer

Specialized in scalable SaaS platforms, REST APIs, social media systems, and secure backend architectures.

Professional Summary

Backend Developer with strong experience in Laravel and modern full-stack development. I build high-performance, secure, and scalable web applications including all-in-one social media platforms with posting, messaging, campaign management, and AI-powered insights. I focus on clean architecture, API design, performance optimization, and real-world production readiness.

Technical Skills

- **Backend:** Laravel, REST APIs, Authentication (JWT, OAuth), RBAC, Webhooks, Payment Gateway Integration
- **Frontend:** React.js, Redux Toolkit, Tailwind CSS, Framer Motion, Responsive UI
- **Databases:** MySQL, MongoDB
- **Security:** Bcrypt, Token-based Authentication, API Validation, Secure Session Handling
- **Social Media Systems:** Post Scheduling, Inbox Messaging, Campaign Tracking, Analytics
- **AI & Analytics:** AI-powered insights, engagement analysis, performance metrics
- **Tools & DevOps:** Git, GitHub, Docker, Postman, CI/CD-ready workflows, PWA concepts

Key Projects

All-in-One Social Media Management Platform

Designed and developed a SaaS platform for multi-platform post publishing, scheduling, inbox messaging, campaign management, and AI-driven insights using Laravel APIs and React.

Booking & Delivery Management System

Built a role-based system for admins, drivers, and users with live booking updates, driver assignment, notifications, and scalable backend logic.

Payment Gateway Integration Module

Implemented secure payment flows including callbacks, webhook validation, transaction history, and failure handling.

Progressive Web Application (PWA)

Developed offline-capable, performance-optimized PWA with caching strategies and mobile-first experience.

Core Strengths

- Strong backend architecture & database design
- Product-level thinking for SaaS applications
- Security-first development approach
- Clean, maintainable, and scalable code
- Ability to own projects end-to-end

Portfolio showcases real-world applications with strong focus on performance, scalability, and UX.
